TO WHOM SO EVER IT MAY CONCERN

Subject: Regarding Camlab ProfiCNC (CNC Simulator) software system

Reference: - Purchase order no. 13/DVET/2017-18/PO/TE-17048/636 dated 21/03/2018

We have tested ProfiCNC (CNC Simulator) provided by Directorate as per AT. We are truly amazed after knowing its capabilities and features.

Today, after handling this software system, we could recognize that CNC education will be completely turnaround. Combination of Computer and Simulator will act as a Digital CNC for students.

Ncylo teach ware in Marathi language (our mother tongue), explaining CNC details via videos and animation, has made more tempting to learn. Because of CNC Machine Simulator (doNC), before working on very risky and expensive CNC machine, student can perform and practice various operations like write program, take coordinates, job execution, geometry measurement, tool offsets, job cutting and job measurement etc on computer itself. And because of this, various expenses on machine maintenance, raw material, time will be saved. The system is perfect now because of turning and milling machine technology integrated.

Supplier Company, IndiaSoft Pune, has great expertise in technology. Because of their proven experience, in-depth knowledge of Engineers and humble service, they will give complete justice to all 33 ITI project. For this extremely needed and modern skill development technology, we & our team are grateful to Directorate.
