Subject:- Your Customer Support and Automation Studio Functionality

Dear Sunil Sir,

Thanks for your continuous touch with us since the time we procured Automation Studio. I was personally called to attend the last year's user conference but could not make it due to academic load. It is a unique initiative to provide a platform for existing users to showcase their work and projects created in such a multifunctional software tool.

We are using it in our FMS & Robotics Lab. Our UG, PG students are actively performing their practicals / projects in various fields like Mechatronics, Industrial Automation, PLC & Electrical Control because of its multidisciplinary component libraries.

We are interested to procure a few more licenses along with your proposed solution of Interface Kit. This would be a really great utility since with this we can connect and exchange flexible combination of signals generated from Automation Studio with external hardware and vice a versa.

We found that many students have now new carrier opportunities in the design, maintenance and commissioning areas of Mechatronics, Manufacturing Automation, IFP and Automation Studio is a very fine tool to comply with this industrial need.

We wish you to continue your proactive service as always.

Thanking You !

Dr. Shital S. Chiddarwar
